

Kirriemuir Gas Compressor Station

# NATIONAL GAS TRANSMISSION

**KAEFER UK & Ireland partners with Wood in Nation Gas Transmission System Replacement Projects, upgrading control and safety systems at Gas Terminals and Compressor Stations across the UK.**

KAEFER is the main site contractor, initially supporting Wood in FEED engineering activities, and then undertaking construction and commissioning.

We are currently operating at St Fergus Gas Terminal, and at Kirriemuir, Hatton, and Diss compressor stations. Work at Kirriemuir started in early 2021, and project completion at St Fergus is planned to be late 2026. Overall contract value over the 4 projects will be around £30M. This is an ongoing framework contract, and more sites are expected next year.

Our mission is clear: to be the most reliable and efficient provider of technical industrial services.
